DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a thermal cautery system, classified in class 606, subclass 34.
- II. Claims 25-30, drawn to a power supply, classified in class 606, subclass 34.
- III. Claims 31-44, drawn to an electrical circuit, classified in class 606, subclass 34.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system can be used with standard power supplies and electrical circuits. The subcombination has separate utility such as a power supply for non-electrosurgical applications.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II,III, restriction for examination purposes as indicated is proper.

A telephone call was made to David Crockett on 5-26-05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
